

PRESS RELEASE

Securetec launches portable device WipeAlyser® for DrugWipe®

Objective interpretation and transparent documentation of rapid drug screening tests

Neubiberg, 17 September 2018. Securetec Detektions-Systeme AG, the world's leading manufacturer of products for the detection of addictive and dangerous substances, is launching WipeAlyser, a mobile analysis device for use with the DrugWipe rapid drug screening test.

DrugWipe itself is a highly precise saliva test for fast and safe detection of up to seven drug types. The combination of DrugWipe and WipeAlyser now provides users with a system that digitally records an objective test result at any time. The new device allows all information required including details of test subjects, timestamp and (optionally) GPS data of the test site to be recorded and published on-site as a log and document from the WipeAlyser's integrated printer.

Robust, shock-resistant and equipped with splash water protection, the device is ideal for outdoor use. Speed, intuitive handling and an ergonomic design are some other distinguishing features of this latest-generation device. The configurable rights management system sets permissions for each individual user in line with data privacy guidelines and SOPs and helps prevent settings being changed accidentally. Calibration and self-tests ensure that the WipeAlyser is always totally reliable. Details of the subject tested can be appended to the test results.

DrugWipe is a highly reliable rapid drug screening test for mobile use that delivers fast, precise results. Consumption of up to seven drug types (cannabis, opiates, cocaine, amphetamines, methamphetamines (MDMA, ecstasy), benzodiazepines and ketamine) can be reliably detected with the rapid test, which is easy and hygienic to use. DrugWipe is used by customs, police and law enforcement bodies in more than 30 countries.

The WipeAlyser is available from 17 September 2018.
